## VACUUM BAG

### VACUUM BAG SYSTEM

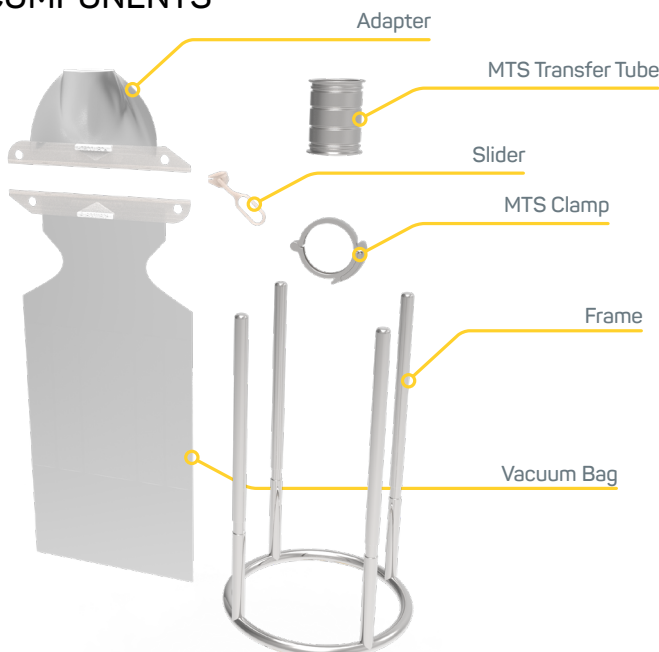

### VACUUM BAG for tablet presses

The special design of the vacuum bag has tabs attached on the outside, which hold the bag open in a frame. The flexible Flecozip MTS secondary interface in turn is located around the MTS transfer tube.

This arrangement ensures a closed entry of tablets into the flexible vacuum bag even under negative differential pressure conditions. The filled bag can be easily removed from the frame.

Whether standardized sizes or custom-made, the Vacuum Bag application provides the right connection and safe, contained transport from the tablet press to further processing units.
